EXPERIENCE

Rubidex

Mar. 2023 – Present

Senior Fullstack Engineer

Condesa, Mexico City

- **BMS Intel:** Led the **system architecture**, development, and deployment of a high-scale Building Management System (BMS) utilizing **Next.js**, **NestJS**, and **PostgreSQL**. Designed robust **WebSocket** integrations for real-time sensor data ingestion and device control. bmsintel.com
- **BMS Admin Panel:** Solely architected and developed a high-performance administrative interface using **Next.js**. Established a **modular, clean-room architecture** following **SOLID principles**, ensuring the codebase remained highly maintainable and easily extensible for complex feature updates while deployed via **Vercel**.
- **Gridlock:** Contributed to the UI/UX engineering and feature development of a distributed digital asset security platform. Implemented general fixes and performance optimizations to the **Next.js** frontend to enhance user engagement and security flows. gridlock.co
- Engineered scalable **RESTful APIs** and **database schemas** to support multi-tenant environments and real-time analytics across the entire Rubidex product suite.
- Containerized application services using **Docker** and established robust **CI/CD pipelines** to automate deployments and ensure 99.9% system uptime.
- Provided technical **leadership** and **mentorship** to junior engineering teams, establishing standard practices for clean code, SOLID principles, and clean architecture.

Listo.mx

Nov. 2021 – May 2022

Software Developer Intern

Roma, Mexico City

- Extracted and synthesized data from financial account statements to generate personalized **PDF summary reports**.
- Extracted key data from invoices and presented it dynamically in the user interface using **Django**.
- Implemented **automated tests** to ensure code quality and detect errors during deployment.

PROJECTS

CityCommute

2024 – 2025

Lead Developer

Simulation & Visualization Engine

- Engineered a high-fidelity urban mobility simulation using **Python (Mesa)** and **FastAPI**, implementing **A* pathfinding** and multimodal transport logic for cars, pedestrians, and buses.
- Developed a real-time visualization engine with **React**, **Vite**, and **Tailwind CSS**, utilizing **WebSockets** for low-latency state synchronization across thousands of agents.
- Applied **Clean Architecture** principles to decouple the core simulation engine from the visualization layer, ensuring high maintainability and system scalability.
- Refactoricé y optimicé significativamente el proyecto base IBM City Project-Multiagentes, incorporando analítica avanzada para el análisis de eficiencia del tráfico y una interfaz moderna con diseño glassmorphism.

Ticketcrush.mx

2025

Freelance

E-commerce & CMS

- Built and managed dynamic pages for events and UI content using **Strapi** as a headless CMS.
- Designed reusable **content models** to support event listings, ticket information, and modular UI components.

EDUCATION

Tecnológico de Monterrey

Aug. 2019 – Jul. 2024

B.S. in Computer Science and Technology

Álvaro Obregón, Ciudad de México

- **Coursework:** Object-Oriented Programming, Data Structures and Algorithms, Analysis and Design of Advanced Algorithms, Multi-Agent Systems, Software Development, Advanced Artificial Intelligence.

SKILLS

Lenguajes: Python, JavaScript/TypeScript, HTML/CSS, C#, C++, Bash, SQL, NoSQL

Tools: React, Next.js, FastAPI, Vite, Shadcn/UI, NestJS, Docker, Git, Linux, Neovim, Figma, Antigravity
